Resources

All you need to get started with Capitis

INTRODUCTION

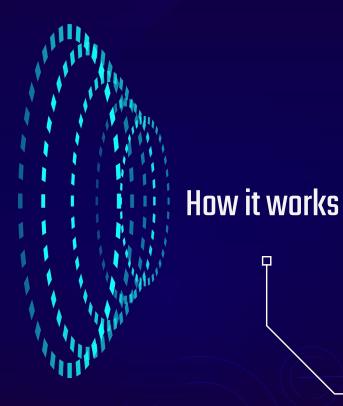

Capitis exists as there is a need for a new form of project funding. Traditionally startups would have to plead for funding from VCs and give up the control and ownership of their idea. Capitis allows startups to secure funding without any of the drawbacks associated with traditional sources of funding to start and continue developing their idea. Early backers can also continue to reap the rewards of backing a successful project or business from the beginning

OUR GOALS

Our goal is to provide worthy ideas and people the funding they need to get off the ground and continue to receive funding to continue developing their business without having to give up ownership or control of their idea.

After a startup completes our KYC requirements put in place to keep our community safe they will be listed on our system for our community members and coin holders to view and decide whether or not to invest. If the funding stage is successful the project will receive the amount of Capitis as their initial funding. They will only be allowed to withdraw a set amount per month to ensure Capitis' price is not affected by the selling or the raised funds on the open market. The project will then receive their own asset running on the Capitis network. They along with the initial investors will receive monthly payments in the projects native asset. This allows initial investors to profit from backing successful projects and allows projects to receive continued funding.

Project

A project asks for 10k CPTS in exchange for 10% in their idea. They get funded the full 10k CPTS.

After receiving the funding:

- They receive 1k CPTS (10% of the funded amount) per week to start the project.
- Their own digital asset running on the Capitis network with a supply of 1 million coins. They are entitled to 900,000 coins of which they receive 1% per month to continue funding.

CPTS Holder

A CPTS holder spotted the project on our website. They contributed 1K CPTS towards the 10K funded amount meaning they are entitled to 1% of the idea which is equal to 10,000 coins of which they will receive 5% of per month as dividends for being an early backer of the project.

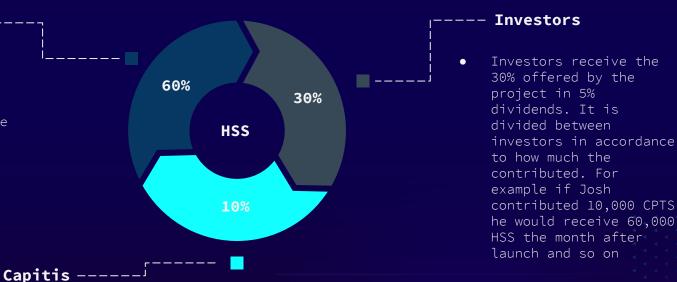

Funding Distribution

Example: Harry's Shoe Shop wants 50,000 CPTS to set up their initial business and for the 50,000 CPTS they are offering 30% of their business.

Harry lists on the Capitis platform and he raises the 50,000 CPTS. The Capitis team launches Harry's Shoe Shop Token (HSS) on the Capitis platform with a fixed supply of 1 million coins.

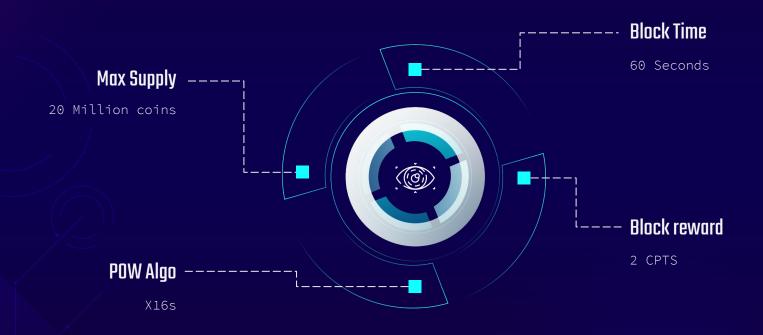

Harry's Shoe Shop

- Harry's Shoe Shop receives 5,000 CPTS a week for 10 weeks to setup the business.
- After that they receive 5% of their 60% of their 60% of their HSS in other words they receive 600,000 HSS a month after they launch and so on to maintain the business

 The Capitis team receives 100,000 HSS for the service

Coin Specifications

Coin Value

What measures are in place in order to preserve the value of Capitis?

 As funded amounts are paid in CPTS it is only released in 10% a week increments to stop the selling of CPTS on the open market to greatly affect the price.

What measures are in place in order to preserve the value of the assets generated by funded projects and paid to investors as dividends?

 As well as the investors receiving monthly payments in the projects assets the project itself also receives monthly payments in the same assets meaning they have an incentive to do everything they can to maintain the price of the asset. Please Reach out to us if you have any questions or enquiries.
